

Coupling system for abrasive and corrosive applications

Built-in rubber lined (fully embedded) coupling system

Built-in rubber lined (fully embedded) coupling system

Steel fittings are rubber lined, built-in and permanently vulcanised into the hose body during manufacture; forming an integral part of the assembly. The fitting is chemically-bonded and mechanically-locked into position with fully embedded retaining wire between single or twin bands. Designed for heavy-duty use and medium to high-pressure applications.
